

Digital Media Manager

Alcorn McBride's Digital Media Manager lets you **manage your multimedia players**. Whether they're nearby or around the world, Digital Media Manager lets you **group units** and treat them as a single device. Transfer files to one or a hundred with a single **drag-and-drop**.

It automatically **synchronizes files** — media, playlists, schedules, everything — between your PC and the remote units. View the files and status of every player.

It also provides a single, unified workbench where you can create and distribute the media, **playlists** and **schedules** for every device in your network.

Alcorn McBride Inc.

3300 S. Hiawasse Rd., Bldg 105, Orlando, FL 32835
Tel (407) 296-5800 Fax (407) 296-5801

Digital Media Manager is more than a configuration and file transfer tool. It also lets you **send instantaneous commands** to one or multiple units or groups. It's great for updating **scrolling banners** with the latest **news or specials**. And what a time saver during system testing!

In addition to text and graphic updates, Digital Media Manager also lets you **stream live audio** from a PC to Digital Audio Machines — even across the Internet. It's great for **paging** or overriding the schedule with a temporary program during holidays or special events.

Digital Media Manager works with Alcorn McBride's Digital Video Machines DVM4, DVM/HD, and DVM/8002, Information Station, and Digital Audio Machine AM4. It also **works with other ftp-enabled devices**.

With Digital Media Manager on your desktop you'll have your entire multimedia universe at your fingertips. Download your **free demo copy** now from <http://www.alcorn.com>
